

AQUALOGY TO DEVELOP A CONSULTANCY PROJECT FOR THE COMPANY CELSA MANUFACTURING

Aqualogy is to develop a consultancy project for Celsa Manufacturing, one of the UK's largest companies in steel production and recovery.

Celsa Manufacturing will see its supply of water (about 1 million cubic meters a year, some 120 m³/h) interrupted by the concessionaire Welsh Water in October 2014, making it essential to secure an alternative resource. To this end, Aqualogy will conduct a feasibility study of the different alternatives and the network infrastructure necessary for the supply. The various options available include the construction of a tertiary treatment plant using the wastewater from the treatment plant in Cardiff, managed by Welsh Water itself.

This project positions Aqualogy UK as a leader in the field of water reuse for industry, and is a step further in the consolidation of its status as a supplier of solutions and technologies related to water and the environment.
